“PATIENT TESTIMONIAL”

"My initial blood pressure was 230/120 mmg. And I did not realize that I had renal failure, heart failure and a small stroke. After one-month of intensive monitoring and treatment, even daily tele-visit with my doctor directly, my health was back to normal and I can enjoy jogging again. The most important thing to me is that I did not need to stay at hospital a single day with my busy work and travel schedule during this process."

~ EL 51 Years Old

"The cardiac monitoring has provided me a piece of mind over 3 years. When I had arrhythmia while I traveled 2,000 miles away from home, my cardiologist diagnosed my arrhythmia immediately. After the right medication on time, my A Fib converted within 3 hours without going to hospital on the road to see other doctor I don't know."

~ KK, 78 Years Old
